

MiniZn integration with python

- Three functions from minizinc is called namely
 1. Instance
 2. Model
 3. Solver
- **Platforms** selection model is loaded into the Model.
- MiniZinc solver configuration for Gecode is loaded.
- Instance of the platforms model for Gecode is created for initiating the instance.
- All the variables value is assigned inside the instance.
- The instance is solved to get the appropriate solution.
- **Code - GitHub**
